

# ARTIFICIAL INTELLIGENCE

## The Very Idea

**Vasant G. Honavar**

Dorothy Foehr Huck and J. Lloyd Huck Chair in Biomedical Data Sciences and Artificial Intelligence  
Professor of Data Sciences, Informatics, Computer Science, Bioinformatics & Genomics and Neuroscience  
Director, Artificial Intelligence Research Laboratory  
Director, Center for Artificial Intelligence Foundations and Scientific Applications  
Associate Director, Institute for Computational and Data Sciences  
Pennsylvania State University

<http://ailab.ist.psu.edu>

## Artificial Intelligence – The Very Idea

- **Focus of the course**
  - Demystifying AI
    - Basic knowledge of how AI works
    - Ethical and societal implications of AI
  - NOT the engineering of AI systems
- **What you hopefully learned**
  - Intellectual roots of AI
  - Disparate goals of AI
  - Many types of AI and their applications
  - The risks and benefits of AI technologies
  - The societal impacts of AI technologies
  - How to tell AI science from science fiction
  - How to have an informed conversation about AI

## What did we learn?

- **Intelligence - Natural and artificial**
  - What is intelligence?
  - Theories of intelligence
  - Goals of artificial intelligence
  - Measures of artificial intelligence – Turing test etc.
- **Computation and intelligence**
  - What is computation?
  - Machines that compute
  - Logic functions, automata, Turing machines
  - Computational theory of minds
  - A brief history of AI

## What did we learn?

- Hierarchy of intelligent agents
- Knowledge representation
  - What is knowledge representation?
  - Kinds of knowledge representation and the inferences they support
- Problem-solving machines
  - Finding a solution
  - Finding an optimal solution
  - Problem decomposition
  - Heuristics
  - Constraint satisfaction

## What did we learn?

- Reasoning with knowledge
  - Reasoning with rules
  - Reasoning with logic
  - Reasoning with probabilities
- Learning machines
  - Supervised learning
    - Nearest neighbor classifier
    - Naïve Bayes classifier
    - Linear classifier
    - Decision tree classifier

## What did we learn?

- **Language models**
  - Small language models
  - Large language models
  - Promise and pitfalls of language models
- **Promises and pitfalls of AI**
  - Ethics of AI
  - AI and future of work
  - Will machines replace humans?
  - How to get AI to empower humans?

## What did we learn?

### If you are not technically inclined

- Hopefully, the course demystified AI for you
- You are a little bit better prepared
  - To deal with the world being transformed by AI
  - To engage in informed conversations about the promise, potential and pitfalls of AI

### If you are technically inclined – like math, programming

- The course whetted your appetite for learning more about AI
- You got a glimpse of what lies under the hood of AI systems
- You are a little better prepared to
  - Contemplate whether a career in AI might be right for you
  - Whether you want to get into upper-level AI courses or even a new BS in AI Methods and Applications scheduled to launch in fall 2025

## Pursuing AI beyond this course

- Take upper-level undergrad AI courses and/or pursue a BS in AIMA
- If you are interested in a summer research opportunity, there are many options
  - <https://cra.org/cra-wp/dreu/> (Next Deadline Feb 25)
  - <https://tinyurl.com/computing-research> (a large list of summer research opportunities for undergrads)
  - Local opportunities including in my lab
- Consider pursuing a graduate degree if you want to shape the future of AI
  - Here is some material that might help you think through whether grad school may be right for you
    - <https://faculty.ist.psu.edu/vhonavar/grad-advice.html>
- If you stop by my office hours, I'd be happy to chat with you

## A few remarks about the final

- Homework 10 and the quiz will be graded by tomorrow
- Final will be online, administered on Canvas
  - Scheduled for 12/16/2024, 6:50pm through 8:40pm
  - Available at 6:45pm and will be locked at 8:45 pm
- Exam will cover materials from lectures 1 through 21
- Expect 5-6 problems similar to the homework problems
- You should be able to do well if you have mastered the material from the lectures and required readings

## Miscellany

- If you want to have a copy of the course notes for your personal use, please download it from canvas and save it
- You can reach out to me for an updated version at the end of summer 2025
- Please fill out the course evaluation
  - This is the first time this material has been taught anywhere as a freshman course with no prerequisites
  - The goal is to offer an introduction to AI for all majors
  - Constructive feedback would be most helpful as we finetune the content and presentation
